

TBI KSA (Branch Comments) – R21 / MVP1 demo session**26.05.2025**

#	Module – MVP1	Comments
1	Accounts Module	1. IBAN generation format is required as per the bank's specifications 2. In the "Mode of Operation" field, to have an additional option labeled as "Other". 3. Dormancy requirements, if no transactions processed in any account to be put automatically as dormant, dormancy report to be generated in system under the reports in this module 4. At the time of account opening, if the account holder "company" is backlisted at any level (UN, local, OFAC, etc.) should display "Error/Override" option and no account to be opened.
2	Customer Module	1. Authorizes data: a. First Name b. Fathers Name c. Last Name d. National Address e. ID details 2. The SAMA class code to be defined as mandatory 3. Power of Attorney details (authorization matrix to be extracted in details from POA and input in system so teller and ops can view what is the authorization mode "single, jointly, etc. 4. Signature specimen of Authorizes to be captured (sigcap capture) 5. Commercial Registration Number to be mandatory 6. Unified Number to be added to list of values 7. List of client's Customers and Suppliers (mandatory by SAMA) 8. Ownership details with percentage for corporate clients (ownership unwrapping) 9. Customer Rating field to be populated with risk levels: a. Low b. Medium c. High 10. PEP Tab with details for PEP clients 11. This module to be integrated with FCM module which was missing in the MVP1 build
3	Term Deposit	12. The day count for interest calculation should be changed from 360 days to 365 days as per SAMA and market practice. 13. Fixed deposit to be in Tranches for ease of booking and cash management for the client 14. Ensure that NIMS/FTP/MIS calculations and reports accurately reflect the assigned Relationship Manager's name, in line with market practices, for the purpose of incentive calculations 15. The Fixed term deposit maturity to have the option to rollover but to have it goes to approvals every time but auto generate Book deposits based on frequency (for example: weekly, monthly, quarterly) according to the schedule and pay interest accordingly.

TBI KSA (Branch Comments) – R21 / MVP1 demo session

26.05.2025

		16. To keep the option of term deposit field (box) manually to input the term duration for the deposit which is not available in the drop down list such as two weeks duration. 17. If the customer's documents expire (such as legal ID, passport, iqama, etc.) and they try to book a deposit, the system should raise a pop up message and override/error. 18. Agreed that Treasury to book the transaction and back office operations to post it.
4	Teller Module (Cheque Management Module)	19. Finalize Checkbook Types, Systems limited to Confirm supported checkbook sizes (e.g., 25, 50, 100 leaves). Ensure drop-down list reflects available types. 20. Default Starting Check Number : Auto-default starting number from stock based on last used check. Keep field editable to allow manual override but at the operation manager level (level of authority to be set up). 21. Confirm Active Check Statuses: Decide whether to keep only 70 (Request) and 90 (Issuance) or include others (e.g., Sent for Printing). (was raised by UAT and to be defined in details) 22. Check Charges Definition : Confirm charge applicability (e.g., issuance, courier, stop payment). Align with SAMA tariff regulations. 23. Inquiry Enhancements: Provide inquiry view showing: Used check numbers with statuses (cleared, stopped, returned). Avoid merging all statuses in one view for clarity. 24. Stop Payment Configuration: Confirm and configure stop reasons (lost, stolen, destroyed, etc.). Enable charge codes and amounts if applicable. 25. Foreign Currency Check Issuance: to allow checkbooks for USD, EUR accounts beside the SAR, however cheques can't be cashed an only cleared as no physical cash will be provided. 26. Check Printer Integration: Define integration specs for automated printing with serial number security, Coordinate with integration team and printer vendor. 27. Check Scanner for Clearing: Check if it will be handled under the TPH/Clearing Module.
5	Finance Module	28. Review & Finalize Category Codes as per SAMA Class codes as mandatory - Validate if preconfigured category codes align with bank's product and reporting needs (to have a separate meeting to discuss this requirement in details) as per bank's product portfolio and reporting structure. 29. SAMA Reporting Compliance (SAMA net) is missing which is a key regulatory requirements - Confirm system's GL/categorization complies with SAMA reporting (from systems limited side) - Obtain official SAMA template and map accordingly (bank can help with getting it)

TBI KSA (Branch Comments) – R21 / MVP1 demo session

26.05.2025

		c. TBI have asked Systems limited to check with the other Saudi bank regarding the reporting which completed their UAT and to have same setup with possible customization if required since other bank business strategy is similar with TBI Saudi. 30. Governance for Category Maintenance a. Establish process and controls for who can create/edit/delete category codes as per bank's internal policies. Typically, such access controls are managed through rights and authorization settings within the system defined by the bank. 31. Internal Account Structure Validation a. Review structure: Currency + Category + Sequence + Company Code which should be accurate and to Ensure it fits multi-company and multi-book setup and same length 32. Product Mapping a. Map each banking product to the correct P&L or balance sheet category and to have a meeting with TBI to discuss in details 33. Posting Rules & Adjustments a. Define how transactions are posted. b. Clarify adjustment handling when wrong category is posted (reversal vs transfer). c. A transaction can be deleted only if it has not yet been authorized. d. Once authorized, a transaction cannot be deleted but must be reversed and This behavior should be verified during UAT and SIT testing phases. 34. User Training on Category Restrictions a. Communicate that category codes (GLs) cannot be changed after posting/authorization. b. Systems limited defined that this is a standard behavior in T24 and should be tested in UAT/SIT to ensure compliance. 35. Customize Finance Menu UI a. Tailor T24 finance menu to match current system for smoother transition. b. TBI needs to provide detailed requirements for customization—covering all roles including makers, checkers, finance officers, and finance managers. 36. Reporting Dimension Mapping a. Ensure categories link with sector, industry, and branch data for proper financial reporting. b. A dedicated session is required with TBI and domain leads to finalize these mappings, which will then be validated in UAT and SIT. 37. Align Internal Accounts with IFRS 9 Needs (This was missing during the demo despite the bank already agreed with thin the MVP1)

26.05.2025

		a. Ensure category and internal accounts support ECL staging, write-offs, reversals. 38. Provision Posting and Reporting Readiness a. System limited to confirm the system supports automated and manual posting of provisions (Stage 1, 2, 3) since IFRS9 should be already within the setup. 39. Ensure extraction capability for audit and regulatory reporting in excel format. 40. System limited confirmed that Below is standard reports generated by the T24 system: i. CRC: Consolidated balance sheet, profit and loss statement, and trial balance ii. CRF: Branch-wise balance sheet, profit and loss statement, and trial balance iii. CRB: Contract-wise balance sheet and profit and loss statement iv. Transaction Journal: Daily summary of transactions by branch v. General Ledger Report: Account/category-wise transaction details
6	Payments	41. Purpose of the transaction field to be mandatory as per SAMA requirements 42. Relationship between customers for both internal and outgoing payments as mandatory 43. Beneficiary address to be mentioned 44. Debit and credit IBAN fields to be removed from internal transfer screen and to keep the account number only 45. General ledger "GL" P&L movement should have approved matrix to authorize the transaction. Matrix related requirements to be provided by the Bank 46. Rename the charge option labels in Payment Order screen 47. Charge option BEN to be defaulted for outgoing transaction along with the other dropdown charge list (OUR, SHA, etc.) 48. Mandatory field to be highlighted in all payment screens as "*" and no override to be allowed i.e. can't move to next step and generate the swift unless all mandatory filed are filled as per the international standard not to have the gap of processing payments with missing details which will create huge impact with the corresponding bank and RFIs load and operations failure 49. Drop down list of all correspondent accounts to be provided in correspondent field i.e. at the back end of the bank to onboard and fill list of corresponding relationships and ops can choose from the dropdown list 50. Fields were missing in the generated swift during demo such as 52A, 53, 56, & 57 i.e. all mandatory swift field to be accurately mentioned as mandatory fields in system. 51. 202 and MT199 were missing during the demonstration

TBI KSA (Branch Comments) – R21 / MVP1 demo session

26.05.2025

		52. The bank strategy will be focusing on FI relationship i.e. bank to receive MT 202 instructions and process MT103 to end beneficiary, this integration between the both transactions for clearance to be defined and automated i.e. if bank received an order of MT202 to process SAR 10Mn against 100 transactions volume, this can't be manual and should be extracted from the MT 202 message against processing the MT103 locally or internationally 53. Missing the reporting side (no reports were identified during the demo session for this module) 54. To define the deference between the generation of FT number and Send Ref and the way how these both references generated from system
7	Trade Finance	55. LCs: No major comments were identified, since this module should be default for all banks despite the business strategy 56. LGs: this was missing in the initial build on R21, however system limited demonstrated 57. FCM to be integrated with this module for screening purposes which was missing in system build.
8	Treasury (FX and Securities)	58. Treasury Transaction Workflow and Amendment Process ○ Treasury users will initiate and create transactions (e.g., FX deals, MM placements, bond purchases) directly through the Treasury interface in the core banking system. ○ Once the deal is created, it will be sent to Operations for validation and final posting. ○ If any discrepancies or required changes are found, Operations will return the transaction via system workflow or ticketing back to Treasury for correction. ○ Upon amendment, the transaction is resubmitted to Operations for final approval and accounting entry posting. ○ This workflow ensures proper segregation of duties (Treasury vs. Operations) and meets audit and control standards required by SAMA. 59. Market Data Integration: Reuters, Bloomberg, Refinitiv ● Integration Scope: ○ All required integrations with external platforms and data sources (e.g., Reuters, Bloomberg, Refinitiv) are to be initiated and handled by TBI (bank side). ○ These integrations will feed real-time or end-of-day prices, FX rates, interest curves, and benchmark data directly into the core banking system for: ▪ Mark-to-Market (MTM) valuations ▪ Daily revaluations and pricing

TBI KSA (Branch Comments) – R21 / MVP1 demo session

26.05.2025

		▪ Trade validation and reporting • Timeline Alignment: ○ Integrations must be ready and technically validated before the final UAT phase. ○ During UAT and go-live, the integrations should be tested for data accuracy, frequency, and fallback scenarios. 60. NOSTRO Account Limits and Treasury Control • Monitoring Responsibility: ○ The Treasury team is responsible for actively monitoring NOSTRO account balances to ensure adequate liquidity before: ▪ Booking FX deals ▪ Placing overnight deposits ▪ Executing money market transactions • System Controls: ○ The core banking system must enforce validation rules so that no FX or overnight booking is allowed if: ▪ There is no sufficient balance in the relevant NOSTRO account, and ▪ No predefined overdraft limit exists with the counterparty bank. ○ In cases where overdraft arrangements are approved, these limits must be configured and monitored in the system to prevent breaching them. • Regulatory Context: SAMA requires strong liquidity risk controls, especially in FX and cross-border operations. Enforcing these validations in the system helps avoid operational and reputational risk. 61. Confirm TMX and SWIFT integration for processing SWIFT MT202 settlements 62. Define logic for threshold-based FX booking triggering margin check 63. Define portfolio types aligned to IFRS 9 and confirm treatment of book cost and accruals 64. Confirm treatment of SAMA reserve deductions for net interest computation 65. To identify the preferred revaluation posting method: "Interoffice (IO)" vs. "Adjustment" in the Treasury module. 66. Securities traded in Saudi Arabia—especially government bonds and sukuk—often follow specific identification formats issued by Tadawul (Saudi Exchange) or the Saudi Central Bank (SAMA). Examples include ISIN (International Securities Identification Number) or local identifiers. - The system must be configured to accept and validate the correct security ID format. If standard formats
--	--	--

TBI KSA (Branch Comments) – R21 / MVP1 demo session

26.05.2025

		(e.g., ISIN) are not sufficient, custom fields or validations may be needed. - To Confirm with the bank will use standard ISINs or requires a customized format (e.g., 14-digit alphanumeric codes, prefixes for local bonds). This ensures proper trade booking, settlement, and reporting. 67. Confirm if daily revaluation of portfolios is required and set up price feeds 68. Daily revaluation of the Treasury portfolio (bonds, FX, derivatives) is critical for accurate financial reporting and risk management. SAMA expects accurate Mark-to-Market (MTM) valuation based on reliable market prices. 69. Core Banking Relevance: The system should automate: - Daily revaluation of portfolios - Booking of unrealized P&L - Updates to balance sheet positions 70. Confirm if daily revaluation is mandatory (it usually is under IFRS and SAMA guidelines). 71. Integrate price feed providers (e.g., Bloomberg, Reuters, or local Tadawul pricing services) into the core banking system for automated valuation. 72. 11. Define rules for impairment testing and provisioning for corporate bonds 73. Under IFRS 9 and SAMA guidance, impairment testing must be performed on debt instruments like corporate bonds, using Expected Credit Loss (ECL) models. 74. Core Banking Relevance: - The system must classify financial assets by stage (1, 2, 3). - Perform periodic ECL calculations. - Generate provisions accordingly and post them to the GL. 75. Define impairment testing rules, including: - Criteria for stage migration (e.g., past due >30 or >90 days) - PD (Probability of Default), LGD (Loss Given Default), EAD (Exposure at Default) inputs 76. Ensure the core system or an external risk engine can handle the ECL computation and automate provision postings.
